Clark County

Overview

1 Tourism drives jobs in Clark County

- Tourism is an integral and driving component of the Clark County economy, sustaining 8.3% of private employment.

2 Visitor spending brings in dollars to the local economy

- Visitors to Clark County generated business sales of \$417.2 million, directly and indirectly, in 2017.

3 Tourism benefits are diverse

- The benefits of tourism span across various industries, including transportation, recreation, retail, lodging, and food & beverage.

State Summary

Key findings

- As visitor spending growth continues, Ohio tourism's performance both in 2017 and over the life of the current expansion impresses.
 - Visitor spending grew 3.5% in 2017 and has increased nearly 18% over 2013 results.
 - Visitor spending increased by \$1.2 billion in 2017 to reach \$35.2 billion; spending is up by \$5.2 billion since 2013.
 - Ohio visitor volumes grew by 7 million to reach 219 million and have grown by more than 24 million since 2013.
 - Visitor spending growth was led by spending on recreational activities with strong growth in food & beverages as lower gas prices, growing wages, and strong consumer confidence supported travel growth.
- Visitor spending of \$35.2 billion generated \$53.3 billion in total business sales in 2017 as traveler dollars flowed through the Ohio economy.
 - Visitor activity sustained 493,625 jobs in 2017, both directly and indirectly.
 - 1-in-11 jobs in the state is sustained by tourism activity – 8.9% of private non-farm employment in Ohio.
 - Including indirect and induced impacts, tourism in Ohio generated \$3.35 billion in state and local taxes and \$3.3 billion in Federal taxes in 2017.
 - In the absence of the state and local taxes generated by tourism, each Ohio household would need to pay an additional \$725 to maintain the current level of government services.

Growth continues in 2017 as economic conditions help spur travel to Ohio

How tourism generates impact

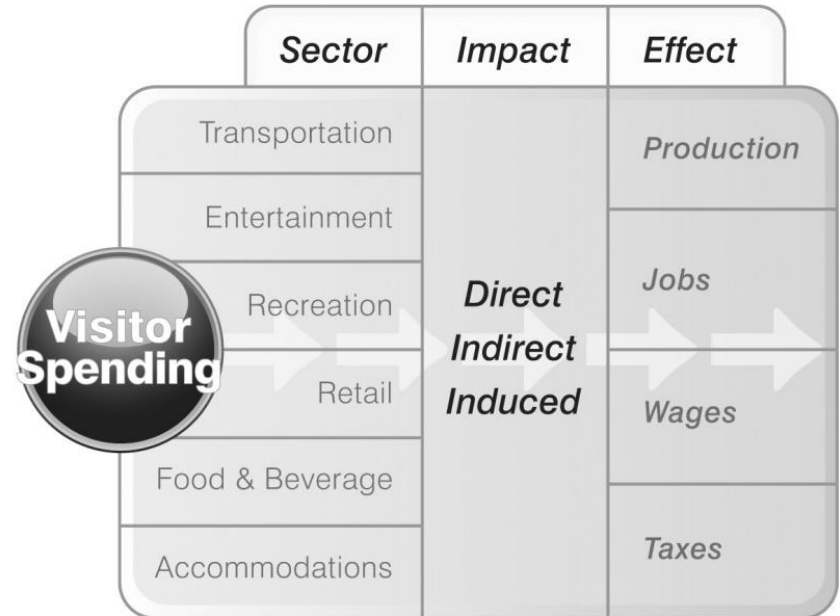

Our analysis of tourism’s impact on Ohio starts with actual spending by tourists, but also considers the downstream effects of this injection of spending into the local economy. To determine the total economic impact of tourism in Ohio, we input tourism spending into a model of the Ohio’s economy created in IMPLAN. This model calculates three distinct types of impact: direct, indirect, and induced.

- Travelers create **direct** economic value within a discrete group of sectors (e.g. recreation, transportation). This supports a relative proportion of jobs, wages, taxes, and GDP within each sector.
- Each directly affected sector also purchases goods and services as inputs (e.g. food wholesalers, utilities) into production. These impacts are called **indirect** impacts.
- Lastly, the **induced** impact is generated when employees whose wages are generated either directly or indirectly by tourism, spend those wages in the local economy.

The impacts on business sales, jobs, wages, and taxes are calculated for all three levels of impact.

Tourism spending flows through the economy and generates economic benefit through multiple channels.

How tourism spending flows through the economy and generates economic benefits

Tourism's impact on business sales (1 of 2)

Visitors spent \$35.2 billion in Ohio in 2017. This supported a total of \$53.3 billion in business sales when indirect and induced impacts are considered.

Tourism economy generated business sales, millions				
	Direct	Indirect	Induced	Total
Agriculture, Fishing, Mining	-	250.6	100.5	351.1

Tourism's impact on taxes

Tax revenue of \$6.7 billion was directly and indirectly generated by tourism in 2017.

State and local taxes alone tallied \$3.35 billion in 2017.

Each household in Ohio would need to be taxed an additional \$725 per year to replace the traveler taxes received by state and local governments.

Visitor spending, visitor supported jobs, and business sales generated \$6.7 billion in governmental revenues.

Methodology notes

County level economic impact estimates are derived from the State of Ohio tourism economic impact report, also produced by Tourism Economics. Visitor spending estimates are based on several sources including:

- Visitor profile and spending estimates from Longwoods International, an international consumer research firm.
- STR data on hotel metrics including room demand, revenues, and occupancy rates.
- Statistics Canada data on spending in Ohio.
- Office of Travel & Tourism Industries estimates of overseas visits to Ohio.
- Sales tax data on lodging, retail, recreation sectors available from the Ohio Department of Taxation
- Local lodging tax data collected directly from the counties.

Economic data are compiled by industry at the county level, from the Bureau of Economic Analysis and Bureau of Labor Statistics. These provide industry detail on employment, value added, and wages by industry.

The economic impact analysis uses an IMPLAN (www.implan.com) input-output model for the state of Ohio which tracks spending by visitors to industries and among industries and households. This estimates indirect (supply chain) impacts and induced (income effect) impacts as wages are spent in the state economy.

About Tourism Economics

Tourism Economics is an Oxford Economics company with a singular objective: combine an understanding of tourism dynamics with rigorous economics in order to answer the most important questions facing destinations, developers, and strategic planners. By combining quantitative methods with industry knowledge, Tourism Economics designs custom market strategies, destination recovery plans, tourism forecasting models, tourism policy analysis, and economic impact studies.

With over four decades of experience of our principal consultants, it is our passion to work as partners with our clients to achieve a destination's full potential.

Oxford Economics is one of the world's leading providers of economic analysis, forecasts and consulting advice. Founded in 1981 as a joint venture with Oxford University's business college, Oxford Economics enjoys a reputation for high quality, quantitative analysis and evidence-based advice. For this, it draws on its own staff of more than 200 professional economists; a dedicated data analysis team; global modeling tools, and a range of partner institutions in Europe, the US and in the United Nations Project Link. Oxford Economics has offices in London, Oxford, Dubai, Philadelphia, and Belfast.
